INTRODUCTION

The Post-Census Regional Household Travel Survey was sponsored by the Southern California Association of Governments (SCAG), which is the federally designated metropolitan planning organization for the six-county Los Angeles region of California. In order to document household characteristics and travel behavior, SCAG contracted with NuStats to conduct a large-scale study of regional travel. The study results will be used to update SCAG's travel demand model as well as provide a foundation for long-range transportation planning efforts in the region.

The SCAG region is comprised of six counties: Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. According to the 2000 Census, this region was home to 5,386,491 households. Like many recent surveys, the Post-Census Regional Household Travel Survey relied on the willingness of area households to record all travel and activities made by all household members for an assigned travel period. Households were randomly sampled for inclusion in the study and contacted by telephone for recruitment into the study. Those households that agreed to participate provided information about the household, its members, and all vehicles available to the household. This information was used to create personalized travel diaries, which were mailed to the households 7 to 10 days prior to the assigned travel period. Retrieval of the travel information took place within seven days of the assigned travel period.

In order to meet modeling objectives, the SCAG survey was comprised of several different samples, each designed to provide SCAG with specific types of travel information. These include the base, weekend, Caltrans, RSA, and mode samples. The base, weekend, Caltrans, and RSA samples were designed to be integrated into one data set (the "main" data set), the documentation for which comprises the foundation of this manual. The mode sample augment data users notes are included in that project's final report.

- **Base Sample** of households in the SCAG region across its constituent counties (i.e., Imperial, Los Angeles; Orange; Riverside; San Bernardino; Ventura). This sample was used to collect 24-hour (weekday) diaries.
- **Caltrans Sample**, which comprised the six-county Southern California portion of the California Statewide Household Travel Survey. This sample was drawn from the same sampling frame as the base sample (above) at the same time and was conducted with a field period that overlapped the Regional Travel Survey.
- **Weekend Sample** was designed to measure travel behavior on weekends using a 48-hour diary, whereas the Base, Caltrans, and RSA augment samples of households were designed to measure 24-hour weekday travel behavior. The weekend sample was drawn during the same "pull" as the Base and Caltrans samples. All weekend households recorded travel during a Friday/Saturday or a Sunday/Monday traveling period.
- **Regional Statistical Area (RSA) Augment** was an oversample of subregional geographic areas (RSAs) in the SCAG region with the intent to increase sample at the subregional level.¹ The RSA sample was drawn independently from the Base, Caltrans, and Weekend samples (but from the same sampling frame) during the latter stages of data collection.
- **Mode User Augment** entailed the collection of seven independent samples of specific types of mode users using intercept (or nonprobability) methods. These data were collected to support mode specific statistical models of travel volume and behavior.

A sixth survey component entailed the collection of information using global positioning system (GPS) technology from a sub-sample of households completing the 24-hour travel diaries for the purpose of

¹ This effort was curtailed during the fieldwork period due to contractual issues, and thus, resulted in far less oversampling at the subregional level than specified in the original sample design.

auditing the self-reported diary data. The results of this survey component and its associated data sets are presented as a separate report.

The definition of a “completed” household for purposes of this study was one in which (1) all household members provided travel data if the household had 1 to 3 persons in it or (2) all but one household member provided travel data if the household had at least 4 persons in it. In addition to all members providing travel data, the contractual requirement of the project also required that all household address be geocoded and 60% of all non-home/non-work addresses also be geocoded. As a result of these high geocoding standards, the main data set contains 16,939 households distributed by county as follows:

TABLE 1: DELIVERED HOUSEHOLDS BY COUNTY OF RESIDENCE

COUNTY	FREQUENCY	PERCENT
Imperial	915	5.4
Los Angeles	7,262	42.9
Orange	2,316	13.7
Riverside	2,341	13.8
San Bernardino	2,172	12.8
Ventura	1,933	11.4
Total	16,939	100.0

Note: Data are neither weighted nor expanded.

The main data set consists of seven data files, which contain the following types of data:

1. Household File (“cthh_main”): Demographic information about the household, including household size, household vehicles, income, typical mode usage, residence type, tenure of home-ownership, length of time lived at current address, language(s) spoken at home, telephone ownership status and documentation of service interruptions, and documentation of various types of equipment available in the home. In addition, the data set flags the county of residence and summarizes the number of unlinked trips made by all members of the household, the number of household workers, and the number of household students. *Public release note: Household File has been converted to ESRI Arcview shape file. Each household shape point is located at the centroid of its geocoded census tract.*
2. Person File (“permain”): Demographic information about all household members, regardless of age. This includes age, gender, relationship to the main respondent, ethnicity, disability status, level of educational attainment, employment status, and student status, as well as a summary of all unlinked trips made by each person during the assigned travel period. For each student, the data documents the type of school attended and the number of days the respondent goes to school. For all employed respondents, the file contains documentation of the type of job (business and occupation), the number of days worked and average hours worked each week, typical mode to work and whether a vehicle is required at work, availability and details for employer-provided parking and transit subsidies, and documentation about diary usage and proxy reporting during the retrieval of travel data.
3. Vehicle File (“vehmain”): The year, make, model, and fuel type for each household vehicle is documented in this file, along with the vehicle body and fuel type. The year acquired, ownership status (own vs. lease), and primary driver details are also included.
4. Place File (“placemain”). This file contains one record for each place reported as “visited” by the respondents, beginning with where each respondent was at 3 a.m. at the start of the travel period.

The location at 3 a.m. is referred to as the “Place 1” or anchor record, and serves as the origin for the first reported trip. The place file contains all information as recorded in the travel logs, including reason for travel, travel mode, trip departure and arrival times, and mode-specific information such as household vehicle used, persons accompanying the respondent on each trip, parking cost information, and transit usage data.

5. Unlinked Trip Segment File (“odmain”). The unlinked trip segment file contains the same information as the place file, only in trip segment format rather than “place” format. This means that each record represents one origin-destination pair or trip. The same variables describe the same travel conditions as in the place file (reason for travel, travel mode, trip departure and arrival times, etc.).
6. Linked Trip File (“linkmain”). Using criteria provided by SCAG (see Appendix D), NuStats conducted an initial reduction of the unlinked trip segment file to “link” or join trips into a higher order of purpose. This reduction was preliminary and performed to allow for comparison of the current survey results to previous SCAG surveys. It is anticipated that further reduction will be necessary prior to modeling the linked trip data. This file contains the same travel variables as the place and unlinked trip segment file.
7. Location File (“ct_main”): For each address referenced during the course of the study, a unique location number is assigned and placed in the primary file. *Public release note: Location File has been converted to an ESRI Arcview shape file. Each location shape point is located at the centroid of its geocoded census tract.* This location number links that demographic record to the corresponding location record contained in this file. These links include:
 - a. Household File: Household Address (hhaddr)
 - b. Person File: Main Work Address (w1addr), Address of Second Job (w2addr), School Address (sladdr).
 - c. Place File: Each place visited over the course of the assigned travel period, including the Place 1 anchor (locno).
 - d. Unlinked Trip Segment File: The origin and destination for each unlinked trip segment (olocno and dlocno).
 - e. Linked Trip File: The origin and destination for each linked trip (olocno and dlocno).

DESCRIPTION OF THE DATA FILES

The SCAG survey data are contained in seven data files: household, person, vehicle, place, unlinked trip, linked trip, and locations. The household, person, vehicle, place, unlinked trip, and linked trip files are arranged hierarchically with key field indicators to allow linking the information in the files together. The location file contains the addresses for all places visited, as well as the home, work, and school address information obtained during the recruitment interview. A complete listing of all variables and associated codes are contained in the Appendices to this report.

RELATIONSHIP AMONG THE FILES

Table 2 shows the key data fields that link the data files. There are two identifying relationships among the data files. The first links the demographic and travel data while the other links the address data. For the non-address data, each household was assigned a unique “sample number” that is contained in all but the location file and is used to link that data. The “location number” links all the address references to the location file.

TABLE 2: DATA SET RELATIONSHIPS

Data File	Description	# Records	Key Record Reference Field	Location Reference Fields
Household	1 record for each household	16,939	SAMPNO	HHADDR
Person	1 record for each household member	40,376	SAMPNO PERNO	W1_ADDR W2_ADDR S1_ADDR
Vehicle	1 record for each household vehicle (so no records for any 0-vehicle households)	30,274	SAMPNO VEHNO	
Place	1 record for each place visited during the travel period	190,169	SAMPNO PERNO DAYNO PLANO VEHNO	LOCNO
Unlinked Trips	1 record for each unlinked trip recorded during the travel period	144,800	SAMPNO PERNO DAYNO PLANO VEHNO	LOCNO
Linked Trips	1 record for each linked trip recorded during the travel period	134,247	SAMPNO PERNO DAYNO PLANO VEHNO	LOCNO
Location	1 record for each address visited on the travel day as well as the home, work, and school addresses	100,313		LOCNO

The file relationships are shown graphically in Figures 1 and 2.

FIGURE 1 – REFERENCE FIELDS: DATA RECORDS

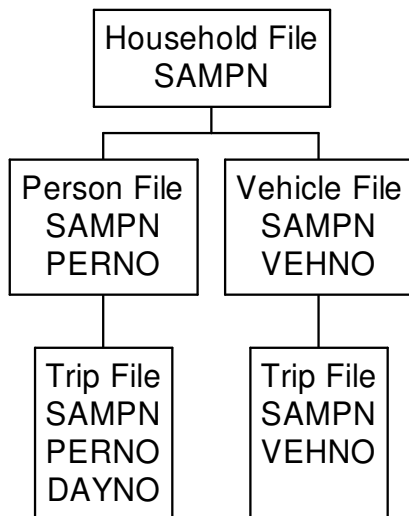

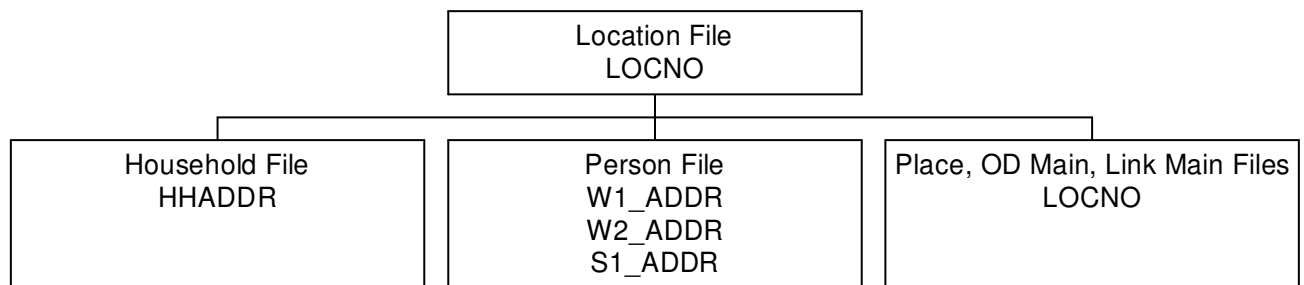

FIGURE 2 – REFERENCE FIELDS: LOCATION RECORDS

COMPUTED AND ADMINISTRATIVE VARIABLES

Most of the data contained in the data sets came directly from the respondent during the course of the recruitment and retrieval interviews. There were, however, some computed variables added to the data set during processing for analysis purposes. In addition, the files contain some administrative variables to aid in the interpretation of the survey results. These include the following:

HOUSEHOLD FILE:

FINWGT	Final Data Weight
EXPWGT	Final Expansion Weight
SOURCE	Variable that documents the sample type (base, weekend, Caltrans, or RSA sample)
REGION	Household county of residence
RSA	Household RSA of residence
HHTRIPSD1	Sum of the number of trips made by the household on Day 1 found in the place, unlinked trip segment and linked trip files. If the household reported zero trips, there will only be a Place 1 record for each household member in the place file.
HHTRIPSD2	Sum of the number of trips made by the household on Day 2 found in the place, unlinked trip segment and linked trip files (valid only if the household was from the weekend sample).
NWORK	Number of household workers (summed from the person file for all cases with EMPLY=1 for a given sample number)
NSTUD	Number of household students (summed from the person file for all case with STUD=1 for a given sample number).
MTRIPS	Flag to indicate that the household was a partial complete (criteria included household size>3 and only 1 household member did not report data.
GPS	Administrative variable to indicate that the household has GPS data
PHASE	Data collection phase
DAY1	Day of week HHTRIPSD1 occurred
DAY2	Day of week HHTRIPSD2 occurred

PERSON FILE:

PTRIPSD1	Sum of the number of trips made by the respondent on Day 1 found in the place, unlinked trip segment and linked trip files. If the household reported zero trips, there will only be a Place 1 record for the household member in the place file.
PTRIPSD2	Sum of the number of trips made by the household on Day 2 found in the place, unlinked trip segment and linked trip files (valid only if the household was from the weekend sample).

PLACE, UNLINKED TRIP, LINKED TRIP FILES:

TRPDUR	Trip duration, calculated as the arrival time at place N minus the departure time from place N-1, in minutes.
ACTDUR	Activity duration, calculated as the departure time from place N minus the arrival time at that same place N, in minutes.

SPDFLAG	Flag to indicate the outcome of the speed check comparing reported travel times with the distance traveled.
---------	---

LOCATION TRIP FILE:

TRACT	Census tract associated with the latitude and longitude corresponding to the reported address.
XCORD	Longitude coordinate for that address
YCORD	Latitude coordinate for that address
AV_STATU	Flag to indicate the outcome of the geocoding process
AV_ADD	Address corresponding to the latitude/longitude coordinates
GEOCITY	City corresponding to the latitude/longitude coordinates
GEOZIP	Zip code corresponding to the latitude/longitude coordinates.
QCFLAG	Flag to indicate the outcome of the quality control process

APPENDICES

APPENDIX A: DATA CODE BOOK

HOUSEHOLD FILE (N=16,506 HOUSEHOLDS)

SAMPN	Sample Number (unique identifier for each household)	
SOURCE	Sample Type	
	Value	Label
	1	Main (1-day/24-hour travel)
	2	Weekend (2-day/48-hour travel on Fri/Sat and Sun/Mon only)
	4	RSA - (1-day/24-hour travel geographic augment)
	5	Caltrans (1-day/24-hour travel from the statewide Caltrans survey)
RECTYPE	Record Type	
	Value	Label
	1	Household
REGION	Home county	
	Value	Label
	1	Imperial County
	2	Los Angeles County
	3	Orange County
	4	Riverside County
	5	San Bernardino County
	6	Ventura County
RSA	SCAG RSA	
HHADDR	Household Address Code (links to address details in location file)	
PHONE	Phone number	
HHSIZE	Number of household members	
NO_PHLNS	Number of household telephone lines	
FMLIN	Fax or modem (if no_phlns>1)	
NOPHN	Without phone service in past 12 months (if income<\$50k or refused)	
	Value	Label
	1	Yes
	2	No
	8	Don't know
	9	Refused
LENGTH	How long without service (if nophn=1)	
	Value	Label
	1	Less than 1 month
	2	1 month to less than 1 year
	3	1 year or longer
	8	DK

MODE1	Mode Used in Past 7 days by any household member (response 1)	
	Value	Label
	0	None
	1	Park-n-Ride to Metrorail
	2	Park-n-Ride to Express Bus
	3	Metrolink
	4	Toll Road
	5	Metrorail (Red, Green, and Blue)
	6	Express Bus
	7	Local or Community Bus
	9	DK/RF
MODE2	Mode Used in Past 7 days by any household member (response 2)	
	Value	Label
	0	None
	1	Park-n-Ride to Metrorail
	2	Park-n-Ride to Express Bus
	3	Metrolink
	4	Toll Road
	5	Metrorail (Red, Green, and Blue)
	6	Express Bus
	7	Local or Community Bus
	9	DK/RF
MODE3	Mode Used in Past 7 days by any household member (response 3)	
	Value	Label
	0	None
	1	Park-n-Ride to Metrorail
	2	Park-n-Ride to Express Bus
	3	Metrolink
	4	Toll Road
	5	Metrorail (Red, Green, and Blue)
	6	Express Bus
	7	Local or Community Bus
	9	DK/RF
MODE4	Mode Used in Past 7 days by any household member (response 4)	
	Value	Label
	0	None
	1	Park-n-Ride to Metrorail
	2	Park-n-Ride to Express Bus
	3	Metrolink
	4	Toll Road
	5	Metrorail (Red, Green, and Blue)
	6	Express Bus
	7	Local or Community Bus
	9	DK/RF
TOTVEH	Number of household vehicles	
VISIT	Overnight visitors (flag for whether there were overnight visitors)	
	Value	Label
	1	Yes
	2	No
	9	DK/RF
VISNO	How many visitors (if VISIT=yes)	
	Value	Label
	9	DK/RF

BIKES	Number of bicycles
Value	Label
98	Don't know
99	Refused

RESTYPE	Type of dwelling unit
Value	Label
1	Unattached Single Family Home
2	Duplex
3	Apartment
4	Condominium or townhouse
5	Mobile home or trailer
6	Group quarters (dorms, barracks, etc.)
7	Other (specify)
9	DK/RF

RESTYPOT Other type of dwelling (if residence type=other, specify)

OWN	Owner/Renter Status
Value	Label
1	Own/buying
2	Rent
7	Other
8	DK
9	RF

O_OWN Other Owner/Renter Status (if own=other, specify)

HLIVE	Months live at home location
Value	Label
98	Don't know
99	Refused

LANG1	Language(s) spoken in the home (response 1)
Value	Label
1	English
2	Spanish
3	Tagalog
4	Chinese (Mandarin/Cantonese)
5	Japanese
6	Vietnamese
7	Cambodian
8	Korean
97	Other
98	Don't Know
99	Refused

LANG2	Language(s) spoken in the home (response 2)
Value	Label
1	English
2	Spanish
3	Tagalog
4	Chinese (Mandarin/Cantonese)
5	Japanese
6	Vietnamese
7	Cambodian
8	Korean
97	Other

LANG3 Language(s) spoken in the home (response 3)

Value	Label
1	English
2	Spanish
3	Tagalog
4	Chinese (Mandarin/Cantonese)
5	Japanese
6	Vietnamese
7	Cambodian
8	Korean
97	Other

OTHLANG Other language (if lang=other, specify)

INCAT HH income Category

Value	Label
1	Above 50K
2	Below 50K
9	DK/RF

INCOME Total 2000 annual household income

Value	Label
1	Less than \$10,000
2	\$10,000 to \$24,999
3	\$25,000 to \$34,999
4	\$35,000 to \$49,999
5	\$50,000 to \$74,999
6	\$75,000 to \$99,999
7	\$100,000 to \$149,999
8	\$150,000 or more
9	DK/RF

EQUIP1 Equipment used in home (response 1)

Value	Label
0	None
1	A portable cellular telephone
2	A fax machine
3	A desktop or laptop computer
4	Web TV
5	Answering Machine/Voice Mail
6	Caller ID
7	Call Blocking
8	Internet Service
9	RF

EQUIP2 Equipment used in home (response 2)

Value	Label
1	A portable cellular telephone
2	A fax machine
3	A desktop or laptop computer
4	Web TV
5	Answering Machine/Voice Mail
6	Caller ID
7	Call Blocking
8	Internet Service
9	RF

EQUIP3 Equipment used in home (response 3)

Value	Label
1	A portable cellular telephone
2	A fax machine
3	A desktop or laptop computer
4	Web TV
5	Answering Machine/Voice Mail
6	Caller ID
7	Call Blocking
8	Internet Service
9	RF

EQUIP4 Equipment used in home (response 4)

Value	Label
1	A portable cellular telephone
2	A fax machine
3	A desktop or laptop computer
4	Web TV
5	Answering Machine/Voice Mail
6	Caller ID
7	Call Blocking
8	Internet Service
9	RF

EQUIP5 Equipment used in home (response 5)

Value	Label
1	A portable cellular telephone
2	A fax machine
3	A desktop or laptop computer

	4 Visually Point Verified (or verified unmatched, out of area)

APPENDIX C: TRIP REDUCTION CRITERIA

The Post-Census Regional Household Travel Survey contains travel data in three files: the place file, the unlinked trip segment file, and the linked trip file. As detailed in the text of the report, the place file contains one record for each place or location visited by the respondents during the assigned travel period. It includes a “Place 1 anchor” to start each day, which also serves as the origin for each trip.

The unlinked trip segment file was created by combining the origin and destination for each trip into a single record. Each record thus includes the activities at both the origin and destination of each trip, as well as the location numbers and other trip-related data.

The linked trip file was created using the following steps:

1. From the place-based file, each household-person-day trip chain was reviewed to determine if there were any destinations in which the primary trip purpose was to “serve passenger” (i.e. pick up or drop off). These places were flagged to be set aside.
2. The resultant places were then converted into trips (with origin and destination characteristics on the same line) to identify “loop trips”, or trips that had identical origins and destinations. An example would be if someone traveled from home to pick up a household member and then returned home. In these cases, the “serve passenger” segment of the trip was re-inserted into the trip chain since the stated purpose of the trip was to pick up a household member. In all other cases, the strategic purpose of the trip was not to “serve passenger” but instead some other final destination/activity. An example of this is when a household member begins his or her trip chain at home, picks someone up, and then continues to work. Without the linking process, this chain would result in two trips – home to pick up, pick up to work; a summary of these trips might read home-based other and non-home based work. In reality, the strategic purpose of the trip is home to work. Summarizing the three trip segments into two by removing the “serve passenger” segment facilitates identification of the true trip purpose.
3. The next step in linking was to determine those trip segments in which the reason for travel was to “change mode”. These segments were removed, and the mode of the resultant linked trip was based on the following hierarchy:
 1. Public bus/public transportation
 2. Driver trips
 3. Passenger
 4. Motorcycle/moped
 5. Taxi/shuttle/limo
 6. School bus
 7. Bike
 8. Walk
 9. Other
 10. Refused

As a result of this hierarchy, if any of the modes in the continuum were “public bus/public transportation” the final trip mode would be defined as a public transport trip. If no mode were public transport, all modes would be scanned again to determine if any were driver trips. This process would continue through the hierarchy. An example would be a trip from home to a park-n-ride lot, defined as a “driver” trip, the next segment might be a public transportation trip, and the last segment might be a “walk” trip to work. In our process, this trip chain would be modified to result in a home to work trip with mode defined as “public transport”.

4. All reported activities at both the origins and destinations were then recoded into the following intermediate typology:
 1. Home
 2. Working at Home
 3. Work
 4. Work-Related
 5. Attend School
 6. Other School Activities
 7. Daycare
 8. Quick Stop
 9. Shopping
 10. Visiting
 11. Personal Business
 12. Eat Out
 13. Recreational
 14. Civic/Religious
 15. Other
5. An origin-destination matrix was used to determine summary trip categories based on origin and destination characteristics as follows:
 - HBW (Home-Based Work)
 - HBWR (Home-Based Work-Related)
 - HBSCH (Home-Based School)
 - HBO (Home-Based Other)
 - HBSHOP (Home-Based Shopping)
 - NHBW (Non Home-Based Work)
 - NHBO (Non Home-Based Other)

APPENDIX D: PUBLIC DATA SET CREATION

The Travel and Congestion Survey was publicly funded and is therefore a public resource. However, SCAG is also obligated to protect the privacy of the survey respondents. Therefore, the results of the survey have been modified to assure to prevent identification of any given household or person. Specifically the following revisions apply:

- Household: Omits address and telephone number, omits textual references to ethnicity or disability status.
- Person: Omits name and textual references to other school or work sites.
- Vehicle: Omits model name
- Place: Omits textual references to places visited
- Location: Coordinates of all locations--including households, schools and work--have been recoded to the nearest census tract

Revisions to Public version of Location File

Steps:

1. Set the following fields as visible on locmain.shp:

RECTYPE
LOCTYPE
AV_STATU
RSA
TRACT
FIPS
ILOCNO

2. Export the shape file as dbf
3. Calculate keyfield in newly created shape file as
 $[Fips].right(3).asnumber * 1000000 + ([Tract].asnumber * 100)$
4. In census tract centroid cover, calculate keyfield fipstract as
 $[county].asnumber * 1000000 + ([name].asnumber * 100)$
(where county = 2 digit fips code and name = tract with decimal for split designations)
5. Add x and y field to label points:
Calc x as `[shape].returncenter.getx`
Calc y as `[shape].returncenter.gety`
6. Join to census tract label points
7. Add as event theme
8. Convert to shape file `../shapes/ct_main.shp`

Revisions to Public Version of Household File

Steps

Export hh_main.shp as dbf after removing fields:

- Sampn (as opposed to isampn)
- Address, city, landmark
- Phone

Add fipstract

Join to ct_main by locno and calc `fipstract = ct_main:fips_tract`

Join to Tr06_d00u and calc x and y variables

Add as event theme

Convert to shape file `cthh_main.shp`

Note: Seven Households are outside of SCAG region: Cause, the county fips code from the location file presumed to be incorrect.
